

What makes SpheresTec Technology so unique?

SpheresTec utilize its patented **HiLEL** technology
(**High Load Exchangeable Location**)
for a variety of medical device applications

Game changer, OR table mounted, flexible arm made up of plurality of SOPHISTICATED LINKS, that becomes rigid with the release of a pushbutton in any spatial desired shape.

- SOPHISTICATED LINKS- increasing by up to 450% the carrying load (torque) in comparison to a SAME SIZE articulated arms currently offered in the market.

- See video clips at –

<https://vimeo.com/user14054643>

- Technology potential: Scalable technology, one of the most challenging tasks for internal use in MIS applications is; inserting "flexible" tool through a randomly curved and narrow path INSIDE THE BODY, once it gets to a desired point it has to become rigid instantly. We can make this feasible.

Laparoscopic camera holding, is only tip of the iceberg of many sophisticated medical fixation applications.
